

ABSTRACT OF THE INVENTION

5 The present invention comprises novel compositions and
methods for eliciting high immune responses, of great specificity
yielding conformationally sensitive antibodies. These antibodies
recognize specific epitopes on a wide variety of antigens including
10 but not limited to, amyloid protein, prion protein, P₁₇₀
glycoprotein. The novel compositions of the invention comprise
supramolecular antigenic constructs generally comprising a
peptide sequence, covalently attached to pegylated lysine resulting
in modified and enhanced peptide presentation.
